KEYMACRO is a small and powerful freeware (2.0 MB) for Windows. It is developed by Softpebble. It allows you to easily use macros in Windows operating systems. For example, you can use Keymacro to quickly convert and convert text files, split and join files, convert between Unicode encodings and so on. It is an essential utility for all computer users. You can use it in different ways: saving your time by storing frequently used sequences of operations (macros) on your computer, using Keymacro as a convenient text editor, or loading existing or creating new macros to work with different application. Screenshots: Features: 1. Executes a sequence of keystrokes on your computer. 2. When you have entered a sequence of keystrokes, it can be executed instantly. 3. It can save a macro for easy access. 4. It can save and load macros. 5. Supports rich text format. 6. Supports Unicode text format. 7. Supports key sequence format. 8. The built-in interpreter allows you to create macro that includes macros. 9. Supports command-line macro. 10. Supports conditional macros. 11. Includes macro editor. 12. Supports environment variables. 13. Supports time zone. 14. Supports automatic exit. 15. Supports command-line execution. 16. Supports object-level view and folder-level view. 17. Supports file-level view and text-level view. 18. Supports hot key configuration. 19. Supports a password-free start. 20. Supports a panel. 21. Supports a new feature "add files" to be opened. 22. Supports a new feature "run file" to be executed. 23. Supports macros for system startup. 24. Supports macros for operating system startup. 25. Supports predefined macros. 26. Supports user-defined macros. 27. Supports predefined and user-defined directory. 28. Supports predefined and user-defined hotkey. 29. Supports predefined and user-defined hotkey with window name. 30. Supports predefined and user-defined hotkey with window name with program name. 31. Supports predefined and user-defined hotkey with window name with program name and application. 32. Supports predefined and user-defined hotkey with window name with program name and application and path cc6f49i4dd
