Note: The keyboard code for keyboard layout (keyboard code for country) is not displayed on the settings menu. Click the button below to watch the Keymacro tutorial video: Keymacro Tutorial Video ADODB Connection Firewall (ACFW) is a network firewall utility. It checks each incoming connection to see if it is safe to allow the connection or not. You can choose which ports to block. You can choose to allow connections from only certain hostnames or IP addresses. This program can be used to control how much connection activity is

allowed to a specific host or network. You can also use this program to block unwanted connections to a specific IP address or hostname. It can limit the amount of connections allowed to a specific IP address or hostname to five times normal. What's new in ADODB Connection Firewall (ACFW) 6.0: [IMPORTANT] ACFW now uses the latest Shareware ADODB Connection Firewall (ACFW) 6.0 files - - which include a text file with additional instructions. [NEW] [IMPORTANT] The Firewall Module now supports the latest Internet Explorer 6, Firewall Module now supports the latest Windows Firewall. [NEW] You can now change the number of IP addresses allowed to connect to an IP address or hostname. [NEW] You can now
