Create, edit and view PDF documents with a unique graphical interface and batch compression. Create a new PDF document (one of several templates included). Add, edit and convert files with the new graphical interface. Create PDF files with the batch compression system. Modify document information, such as title, author, creator, keywords and producer. Generate PDF files with page encryption. Generate PDF files with embedded content of binary and JPG images, documents, OCR, signatures and encrypted PDF documents. Compress and encrypt PDF files and stream them to the specified output folder. Create and use Bookmarks. Create, modify and copy PDF files. Generate and list PDF streams in XPS format. Create and list PDF documents in XPS format. Create XPS document in the PDF format and convert them to PDF documents. Export PDF documents to the specified folder. Use drag and drop to upload documents. Generate files to be downloaded in the ZIP archive. Select text from a PDF document and convert it to text. Generate forms, signatures, barcodes and certificates from a PDF file. Read a PDF document, including page rotation and text. Preview a file in the Zip archive of a PDF document. Show file details in the specified ZIP archive. View metadata and information on the PDF document. Perform PDF document validation. Compress and encrypt a PDF file. Encode and compress text from a PDF file. Convert multiple PDF files to a single ZIP archive file. Create PDF files with multiple page options. View and change file properties on a selected file. Export a PDF document to a single XPS file. Efficiently save multiple PDF documents in the Zip archive format. PDF Image Compress is a free and easy-to-use software that is primarily designed to quickly reduce the size of your PDF documents by converting images into low-resolution, 8-bit-per-pixel grayscale JPEG images. And, it allows you to adjust the resolution, the compression level, and the type of output file. The program is very simple to use and has a modern, clean and uncluttered interface. In addition to this, PDF Image Compress has an option to convert PDF documents to the following formats: PDF, PNG, GIF, BMP, JPG, TIFF and TGA. This simple-to-use tool comes with a help file 45cee15e9a

CFG Generator takes in a desired macro name, an optional passphrase for the macro, and a string for the salt, and creates all the files needed. 6.40 8.10.2009 The latest version of Datadisk Cloner, now offers the ability to perform file based backups as well. With one of the major improvements is the automatic removal of backup files from the original server, that can be specified at installation. With it, backups are created for the entire server data area, regardless of the client configuration. The backup files are saved in a separate subfolder, as well as separate log files. Users can run the program from the Windows Explorer window, using the following paths: C:\Datadisk Cloner\CloneD-Backup\ C:\Datadisk Cloner\CloneD-Backup\logs The taskbar icon can be used to get a list of backups. If new backups are created, the Cloner menu will also show the new backups, along with a description. If the initial backup is not desired, the option of specifying which backup files to remove is available. The backup files can be specified either by name or through the path mentioned above. Important Note: This release contains a known incompatibility with the Trend Micro Deep Security 2011. This means the latest version of Trend Micro Deep Security is no longer detected or processed by Cloner. Fix: This new release will detect Trend Micro Deep Security 2011, and will be added as a supported backup process. 6.13 11.11.2008 The latest version of Cloner 2.6.2 has support for new and improved features. First is the ability to start the Taskbar Icon as well, from within the Cloner utility. The main UI is now available through a new Windows dialog box, the One View window. There is now an additional view available, the Modules view. Also included are the ability to edit backups, for the entire server data. This is supported by the fact that all backups can now be backed up as well, and can be restored. More Backup information can now be accessed in the Backup Details window, and the Taskbar Icon can be used to list a full log of all backups, instead of just the log that is presented when the Backup Client is used. The Program's main menu has
