
DAV Dynamics is a set of classes and methods that allow you to control the amount of feedback and overdrive in a synth audio signal. Dynamic feedback and overdrive are similar to distortion or reverb, but are very easy to control with just a few lines of code. This package contains 19 different Dynamic Processors (Gates, Limiter, Compressor) as well as a dynamic mixer, that can be used in a sidechain to create virtual bus compressor for different effects or to control multiple effects as parallel processing effects. DAV Dynamics (Open Source) Related Downloads The Compressor Mixer (CMM) allows you to add various effects to the side chain that are processed in parallel. When more than one sidechain is set to use the same Compressor Mixer, the different sidechannels can have different settings. The settings of the Compressor Mixer can be saved to presets and loaded from presets. The Gate Dynamics is a Gate Effect that combines a two stage Gate and the Compressor Mixer. It is used in the Delphi ASIO & VST (ASIO/VST) open source package as Sidechain Compressor, i.e. a sidechain compressor for audio signals, but can be used with all effects as sidechain effects. The Gate Dynamics is a Gate Effect that combines a two stage Gate and the Compressor Mixer. It is used in the Delphi ASIO & VST (ASIO/VST) open source package as Sidechain Compressor, i.e. a sidechain compressor for audio signals, but can be used with all effects as sidechain effects. The Compressor Dynamics is a compressor with a built-in sidechain mixer. This module can be used to compress a mono audio signal (input) to an audio signal with the same or more volume (output) as input signal. It can be used for several different purposes. The Compressor Dynamics is a compressor with a built-in sidechain mixer. This module can be used to compress a mono audio signal (input) to an audio signal with the same or more volume (output) as input signal. It can be used for several different purposes. The Gate Dynamics is a Gate Effect that combines a two stage Gate and the Compressor Mixer. It is used in the Delphi ASIO & VST (ASIO/VST) open source package as Sidechain Compressor, i.e. a side cc6f4944dd
