It has created a new lending platform called Small Savings Bank IDI. But can it succeed in India? If you want to know the answer to that question, the answer is - a lot will depend on the scale of its growth. Because it has lent less than Rs.100 crore across all the states and union territories, only a handful of states are covered. And its biggest state, Maharashtra, is itself looking to increase the number of sub-sidiaries. The size of the loans which SBI lends is miniscule when compared to the over Rs.100 lakh crore worth of loans that banks in the country are currently disbursing. SBI, in fact, is the first to have launched a new lending platform which will see it step into the domain of financial institutions that provide banking services. Banks in India have set up sub-sidiaries in order to have a direct line with customers and a reduced level of bureaucracy. One of the reasons why other lenders such as YES Bank and Axis Bank have created their own sub-sidiaries is the fact that their customers are spread across all states in India. However, with SBI's IDI, this will be a niche strategy for it as it will have to lend money to small and medium enterprises (SMEs) across the country. Small Savings Bank IDI SBI launched Small Savings Bank IDI in December this year. This is a new platform that will offer loans for smaller scale operations such as small real estate projects, small consumer loans and agri loans. It is aiming to cater to customers who don't have an account with SBI and also to those who want to borrow but don't have the necessary assets to avail of the loans offered by the bank. The loan amount that IDI can provide as of now is up to Rs.25 lakh, but this can be further increased depending on demand. The interest rate for IDI loans is set at 4 per cent as of now but this can be changed if the IDI grows. SBI has taken to the world of online lending
