Generate serial numbers for your CDs and DVDs Best serial number generator Generate serial numbers of all lengths Generate serial numbers with custom settings Create custom serial numbers and export them Full serial number list on the fly Create encrypted serial numbers No limitation on the number of keys generated Works on all the major Windows versions 1-click installation Create serial numbers for CDs, DVDs, or USB Flash drives List of all generated serial numbers The free version comes with a limited number of serial numbers. We recommend downloading the full version. Generate serial numbers for your CDs and DVDs CD Keys is a tiny but useful program that can automatically generate unique serial numbers for your CDs. This type of software comes to the aid of app developers who want to prevent unauthorized users from accessing their products. The small tool comes with a standard interface and an intuitive layout. CD Keys allows you to select one of the 26 available presets from the drop-down list. Alternatively, you can set up custom filters and save it for further use. So, CD Keys has an extremely simple principle - all you have to do is specify the number of keys to generate, click a button and check out the list with results. Each time the 'Generate' button is clicked, the list is refreshed and generates new and unique serial numbers. This list can be stored on the hard drive by exporting it to a plain text document (TXT). Unfortunately, CD Keys does not incorporate the basic copying function (which can be usually accessed via the right-click menu), so you cannot copy individual keys. The piece of software runs on a very low amount of CPU and system memory, so it should work flawlessly even on older computer systems. It instantly generates serial keys, has a good response time and contains user documentation. We have not come across any issues in our tests; CD Keys did not freeze, crash or pop up error dialogs. At the end of the day, CD Keys delivers a straightforward solution to creating unique serial numbers, although we must take into account the fact that the app's very old and has never been updated.
