

KeyMacro is a quick launch application that changes the user interface to a Mac version of the Windows application "Shortcut". Install KeyMacro and it will make a shortcut on your desktop to launch your application. You can also add any program to your Quick Launch Bar. KeyMacro works the same way as Apple's own LaunchBar, although the application is not associated with Apple. It uses the same keyboard shortcut method as LaunchBar, and launches the same applications, which is why KeyMacro is usually more accurate than LaunchBar. KeyMacro requires Mac OS X 10.5 or later. KeyMacro supports the following features: - Keyboard shortcuts for any applications installed on your system. - Add any program to your Quick Launch Bar. - Quickly launch any application by pressing a custom keyboard shortcut key. - Add a blank keyboard shortcut key to launch the Application Launcher. - Add all applications and shortcuts by simply dragging and dropping them into the Application Launcher. - Add all applications to the Quick Launch Bar by clicking on the "Quick Launch Bar" menu item. - Add shortcuts to the Quick Launch Bar by dragging and dropping them directly to the Quick Launch Bar. - Quick Launch Bar by clicking on the "Quick Launch Bar" menu item. - Launch any application by clicking on the "Launch Application Launcher" menu item. - Launch applications from any folder by clicking on the "Launch Application Launcher" menu item. - Options for preferences. - Notification Center. - "Fallback" options for launching applications if KeyMacro can't find an application to launch. - A search tool to quickly search for applications on your system. - Copy-paste functions. - A keyboard-shortcut, text-box, and notification area. - A background image that can be used for an icon. - Import and export functions to make it easy to transfer and share your "KeyMacro" folders. KeyMacro Requirements: - Mac OS X 10.5 or later. - 2.0 MB of free space on your hard drive. KeyMacro Mac OS X 10.7 and later: If you have used KeyMacro 10.7 or later, you may have noticed that KeyMacro is not available in the Mac App Store or for download from Apple's Mac App Store. Please contact us to purchase KeyMacro 10.7 or later. Thank you! KeyMacro Windows: cc6f4944dd

KEYMACRO is a free and powerful macro manager for Windows. It lets you record keyboard shortcuts, or macro, and then play them as recorded. A macro can be played as a regular keystroke, or it can include one or more mouse actions. For instance, it can record a mouse click, followed by pressing a specific key, and so on. Keymacro lets you play macros and then save them for future reference. You can define macros for hotkeys, common actions, the operating system, the application itself, or even custom ones. The latter can be done in a specific dialog where you define them using the supplied drop-down list and menu. Some of the features included with Keymacro are the following: – Record macros – Define hotkeys and key sequences – Define custom macros – Play macros – Record and play macros – Play multiple macros in the same time – Play multiple macros simultaneously – Play macros of all applications running at the same time – Generate key sequences from other things – Macros for the operating system – Macros for the application itself – Macros for the editor and developer tasks – Macros for the contents of the clipboard – Macros for the DLL files – Macros for the related files – Macros for the events of the dialog – Macros for the built-in applications – Macros for the tab – Macros for the object – Macros for the controls of the form – Macros for the buttons – Macros for the selected object or control – Macros for the current time – Macros for the date and time – Macros for the file system – Macros for the folders – Macros for the users and groups – Macros for the registry – Macros for the certificates – Macros for the trusted places – Macros for the file contents – Macros for the scrollbars – Macros for the control content – Macros for the other control content – Macros for the other controls – Macros for the other controls of the form – Macros for the other controls of the component – Macros for the other controls of the window – Macros for the other controls of the dialog – Macros for the other controls of the form – Macros for the other controls of the component – Macros for the other controls of the window – Mac
