

How Carboxy Therapy CO₂ Works for Skin Tightening & Glow?

Did you ever think about the fact that some skincare procedures can actually make the skin firmer and give it a natural glow without any surgical intervention or long recovery times? It is the non-invasive aesthetic solutions that are gaining more and more ground that make Carboxy Therapy CO₂ the most preferred choice for skin rejuvenation. The treatment is based on the body's response to restore skin quality, so it is applied in cases of firmness, texture, and brightness enhancements. Carboxy Therapy CO₂, by acting at the cellular level, allows the skin to appear healthier and more youthful in the long run.

The Working Principle of Carboxy Therapy CO₂

Carboxy Therapy CO₂ is the process of putting CO₂ on the surface of the skin with the help of a special gel or mask. The skin, upon receiving the signal of the increased CO₂, reacts by accelerating blood flow to the area that has been treated. This reaction leads to higher deliveries of oxygen and nutrients to the skin cells. Consequently, the increased blood flow not only allows new cells to grow but also helps in detoxifying the skin area, thus resulting in healthier and more lively skin.

How It Enhances Skin Glow?

The brightness experienced after Carboxy Therapy CO₂ treatment is the rapid metabolism of skin cells and microcirculation. The skin gets better blood circulation, becomes well-fed and moist, therefore, a more radiant and uniform color is seen on its surface.

Safe and suitable for various skin types

Carboxy therapy CO₂ is a process that is quite gentle on the skin and thus, is an almost universal treatment for all skin types, even for the most sensitive ones. The treatment is without needles and chemicals and hence, can be incorporated into a daily skincare routine if performed with the guidance of medical professionals.

Conclusion

Carboxy therapy, CO₂, is one of the non-invasive methods that one can resort to for skin tightening and a bright complexion. It, however, does not just stay, but rather becomes integrated into the skincare regime through the increase of blood circulation, oxygen, and collagen production, thereby giving the skin long-term benefits.

Are you in search of a premium Carboxy therapy skincare gel? Daejong Medical's CO₂ Pack is not just a fuss-free application but also very effective since the gel and mask are stored in separate compartments, the very secret of their strength. It has already reached more than 30 countries worldwide. Do not hesitate to get in touch with us at sales@daejongmedi.com!
