

How Carboxy Therapy Helps Improve Skin Texture And Elasticity

Do you find that your skin no longer feels as tight and firm, regardless of how diligently you are about applying your skincare products? With time, your skin starts to produce lower amounts of collagen and elastin, which are essential components required to ensure its firmness and vitality. Although the use of moisturizing creams and serums helps maintain the skin's well-being, [Carboxy therapy](#) has become an option worth considering.

What Is Carboxy Therapy?

It is an aesthetic procedure that consists of injecting carbon dioxide under the skin in a controlled manner. The injection of CO₂ stimulates the body to improve the blood flow in that particular area, supplying skin cells with increased amounts of oxygen and nutrients, thus improving the condition of the skin.

How Carboxy Therapy Enhances Skin Texture

- **Increased Blood Flow**

The treatment is based on injecting CO₂ into the intradermal layer to infuse gaseous carbon dioxide below the skin. This process is used to create an oxygen deficit to increase blood circulation and bring fresh RBCs to the treated area.

- **Cell Rejuvenation**

The improvement of blood circulation will aid in the rejuvenation process of the skin cells, thus allowing for the removal of older and dead cells to give way to younger cells.

- **Improves The Look Of Fine Lines**

With carboxy therapy, fine lines and light wrinkles are softened, leading to younger-looking skin.

How It Improves Skin Elasticity

- **Treats Stretch Marks**

The CO₂ substance is injected into the scar tissue, which results in the production of collagen, making scarring less visible. Carboxy therapy stimulates certain growth factors that encourage the production of new blood vessels, which provide a surge of oxygen and nutrients to the treated area.

- **Elasticity Production**

Elastin makes the skin capable of stretching and recovering back into its normal position. Carboxy treatment can thus enhance elasticity in the skin because of improved regeneration processes.

- **Aids In Tightening Of Loose Skin**

A large number of people use carboxy therapy in order to deal with loose skin. With increased collagen and elastin production, the skin gets tightened.

Conclusion

Skin with the appearance of youthfulness is reliant on adequate collagen, circulation, and cell rejuvenation. Carboxy therapy achieves this effect through stimulation of these biological functions in order to rejuvenate the skin.

Looking forward to getting smooth, firm, and glowing skin? DAEJONG Medical brings you the best carboxy Therapy. Just contact us at 82-70-77208210 and order yours today!
