WINDOW TINTING
Essendon
Automotive Tinting for Better Comfort &
Interior Protection

Spending any amount of time in a car over the warmer months in Melbourne can be quite the uncomfortable experience, particularly if you've got untreated windows. The cabin will get hot; the glare is a problem and the constant exposure to the sun will obviously take its toll on the interior. **Automotive tinting** is the solution to all of that, giving you a clean, finished look to your car.

Car window films are available in a range of shades and types so you can choose the one that best suits your requirements. The choice you make will be down to the level of heat and glare reduction you're after, the level of UV protection and the applicable tint laws.

How Automotive Tinting Can Help Your Vehicle

A good film does more than change the look of your car windows. It can provide several useful benefits:

- **Reduced solar heat:** Window film will help to limit the amount of heat that gets into the cabin and that can make a big difference to the comfort of driving.
- **UV protection:** The films provide a degree of protection from the sun's harmful UV rays for both the people inside and the interior surfaces.
- **Less glare:** Tinting will help to reduce the amount of harsh sunlight coming in through the windows so bright conditions are a little easier to deal with.
- **Interior care:** Minimise UV exposure to reduce the risk of fading and deterioration to the upholstery and trim.

- **Privacy and appearance:** Different film shades are available so you can choose the finish that is right for your vehicle and your own tastes.

A darker shade isn't necessarily the best choice. You do need to consider visibility, the type of vehicle and the Victorian tinting requirements before you go ahead with any installation.

Professional application is important. Proper window prep and careful fitting will result in a clean finish with no bubbles or uneven edges. It's worth asking about the film's specs, the installation process and the warranty prior to booking.

Choose a Suitable Tint for Your Car

Every vehicle is going to have different requirements, so it's important to discuss your expectations with an experienced installer prior to selecting a product. You should be asking about the range of films available and their performance rather than going on looks.

For advice on **automotive tinting** and the type of film that would be suitable for your car, get in touch with SolarTint Essendon to discuss your requirements and ask for a quote.
