Window Tinting Strathmore Solutions for
Homes, Cars & Workplaces

Bright sunlight can turn a very comfortable space into an unpleasant one. In Strathmore you can well have homes with sun-facing windows that get quite hot and are very glaring, and drivers will have the same problem with a warm cabin after parking out in the sun. The same applies to offices with large glass windows, particularly where the sun is directly on the desks and computer screens.

Window tinting Strathmore solution can bring an end to all these everyday problems with films being applied to the existing glass. The extent of the benefit will depend on the particular product chosen, with window tinting being able to reduce solar heat, control glare, limit UV and provide extra privacy.

What can Window Tinting Strathmore offer?

The requirements for a car are quite different from those for a home or a workplace. Different film options will obviously be required to meet the needs of each.

- **Automotive tinting:** the right films will help to reduce both heat and glare inside the car and will also limit the amount of UV that penetrates and can cause the seats, trim and all the other interior surfaces to fade and deteriorate.
- **Residential tinting:** home window films to help with the amount of sunlight getting into the living areas. They can reduce glare, protect your furnishings from the UV and provide privacy in various shades.

Commercial tinting: offices and the like with a lot of glass can benefit from films that help with heat and glare control. Certain films will also provide privacy in meeting rooms and work areas.

- **Glass protection:** some window films will actually hold the glass fragments together if the glass does break, providing an extra degree of protection.

What can Window Tinting Strathmore offer?

Before you go any further, think about which windows are going to get the most direct sun and what your objective is. One homeowner may be looking to reduce the afternoon glare without necessarily losing too much light. Another may be looking for better privacy. A driver may be more concerned with cabin comfort and UV protection.

Film shade, product performance and the quality of installation all need to be considered. You need to ask about the range of options available, the warranty and whether it's appropriate for your particular glass. For vehicle windows, it's important to ensure that the tint you select is compliant with Victorian law.

A bit of advice prior to installation will go a long way to ensuring you don't end up with a film that isn't right for your space.
